LACK OF SEXUAL DESIRE - WAYS TO USE DIFFERENT THERAPEUTIC TOOLS TOGETHER

U. Pasini

Aspsc Swiss Psychological Association of Clinical Sexologists, Genève, Switzerland

- 1.** Possibilities to assess the situation - the 5 circles of W. Pasini
- 2.** Considering a primary or secondary lack of sexual desire and selecting among different therapeutic tools now available. The therapeutic tools can be the systemic couple therapy, the emotional-focuses couple therapy according to S. Johnson, the sexotherapeutic bodily approach according to JY Desjardins, the sexoanalysis according to C. Crepault, the erotic approach according to E. Perel or the EMDR therapy according to F. Shapiro.
- 3.** Clinical examples of different types of lack of sexual desire.

FROM LOVE TO ABUSE IN COUPLES

D. Cueto¹, M.A. Cueto²

¹ Univ. Oviedo, Oviedo, Spain, ² Cepteco, León, Spain

Objective: It provides a functional explanation to try to analyze the process that goes from falling in love to abuse within a couple.

Design and Method: We have revised research papers which study the role that oxytocin plays in the development of intensive loving bonds that avoid reasoning, which, after some time, would help to recognize the abuse in a traumatic relationship (Dutton and Painter, 1981). We have also looked into the development of cycles of violence to subdue and control the partner (Walker, 1979). Furthermore, we have considered the evolution of deficits of variables of communication that point out that refraining anger produces resentment (Harburg, 2003). And finishing with the processes of interaction which develop in a progressive, harmonious or unpredictable way that would lead to abuse (Jacobson and Gottman, 1998).

Result and Conclusions: After a lot of observational studies of different couples, we think that a combination of personality variables, environmental or personal circumstances and the progressive interaction would help to predict more easily the fact that abuse could take place in couples relationships.
